PHARMauditor™

Ensure your pharmacy chargemaster is correct and compliant

PHARMauditor.com, Panacea's cloud-based software tool, can be used to maintain accurate pharmacy coding, compliance and reimbursement. Our system automatically performs a comprehensive assessment to provide the information you need to ensure accurate and correct revenue codes, HCPCS/CPT codes, billing units, NDC descriptions, Average Wholesale Pricing (AWP) and Wholesale Acquisition Cost (WAC).

Are you wondering whether you are appropriately capturing your pharmacy revenue and properly billing and reporting and want to know for sure? Find out with PHARMauditor.com. This web-based tool performs a comprehensive review and flags drugs having potentially improper or missing revenue codes, HCPCS/CPT codes, billing units, national drug codes (NDCs), descriptions and pricing. The system:

Improves pharmacy revenue capture and data integrity

Aligns mapping between pharmacy system and CDM

Ensures that proper HCPCS and revenue codes are assigned for all NDCs

Assists with ensuring that correct descriptions and dosages are in CDM and formulary

Maintains current and valid NDC numbers

Ensures accurate billable units, package size and package quantity for NDC

Flags potentially too high or low current price mark-ups relative to AWC and WAC cost

Reduces your RAC risk

Provides access to DrugCodeLookUp.com at no additional cost for quick searches by drug name (brand or generic), HCPCS or CPT code, NDC number, ICD-9-CM code or Therapeutic Class

Our consultants are always available to assist in interpreting the results, implementing the changes and to work with your hospital IT department to migrate the pharmacy data file directly into your pharmacy chargemaster.
