

Outpatient to Inpatient Coding Education Program

Advance your coders' careers by training them on inpatient coding

Keeping your best employees requires you to offer opportunities for growth and development. Panacea's Outpatient to Inpatient Coding program makes it easy by offering a simple and effective way to transition coders from outpatient to inpatient coding.

Program Curriculum

There are two separate tracks available in the Panacea Outpatient to Inpatient Coding program: Basic and Experiential. Depending on the track chosen, coders progress through various modules within the program.

- ❑ **Reimbursement Methodologies (Basic and Experiential)** – These modules reinforce reimbursement concepts under IPPS using MS/APR-DRGs. Course content provides instruction on the reporting of CCs and MCCs and their impact on DRG hierarchy. Other concepts that impact DRGs are also discussed, including POA indicators and HACs. In addition, the modules cover the importance of SOI and ROM and their impacts on CMI and hospital/physician profiling.
- ❑ **Basic and Advanced ICD-10-CM (Basic and Experiential)** – The ICD-10-CM modules are designed as a refresher for those who have been previously trained in diagnostic coding using ICD-10-CM. These modules cover chapter-specific official coding guidelines and instructions on how to accurately code under ICD-10-CM. Numerous case scenarios are included to ensure the learner can apply their new knowledge.
- ❑ **Applied ICD-10-PCS (Basic)** – This course provides a structured, in-depth methodology to both understand and apply PCS. The ICD-10-PCS modules cover chapter-specific official coding guidelines and instructions on how to accurately code under ICD-10-PCS. Extensive coverage of key terms is included to help the learner determine the correct root operation. All PCS sections are addressed, and numerous case scenarios are included to ensure the learner can apply their new knowledge. Other modules included in this course are: Advanced Pathophysiology, Advanced Anatomy and Physiology, and an ICD-10-PCS Coding Practicum.
- ❑ **PCS Refresher (Experiential)** – This course provides experienced coders advanced instruction beyond the Applied ICD-10-PCS module. This is done through additional case studies for expanded application and additional practice.

Learners receive a number of course books including the ICD-10-CM and ICD-10-PCS Coding Handbook, ICD-10-CM (AMA), 10-PCS (AMA), and ICD-10-PCS: An Applied Approach.

Training Built for Busy Professionals

We understand that the learning needs of busy working professionals are very different than those of traditional students. This is why we've built a course with them in mind:

- Interactive, modular learning keeps the user engaged
- Online, self-contained content allows learners to work at their own pace
- Robust reporting and administrative tools keep managers up-to-date on learner's progress
- Hand-on experience opportunities built into the course keep the curriculum applicable in the real world
